

The FLUKA Code

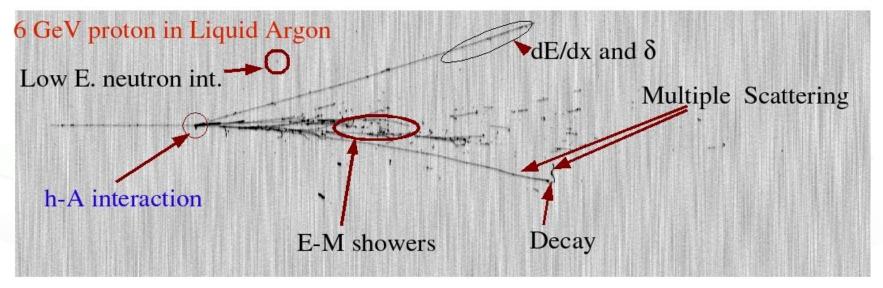

An Introduction to FLUKA: a multipurpose Interaction and Transport MC code

Beginners' FLUKA Course

Main authors: A. Fassò, A. Ferrari, J. Ranft, P.R. Sala

Contributing authors: G. Battistoni, F. Cerutti, M. Chin, T. Empl, M.V. Garzelli, M. Lantz, A. Mairani, V. Patera, S. Roesler, G. Smirnov, F. Sommerer, V. Vlachoudis

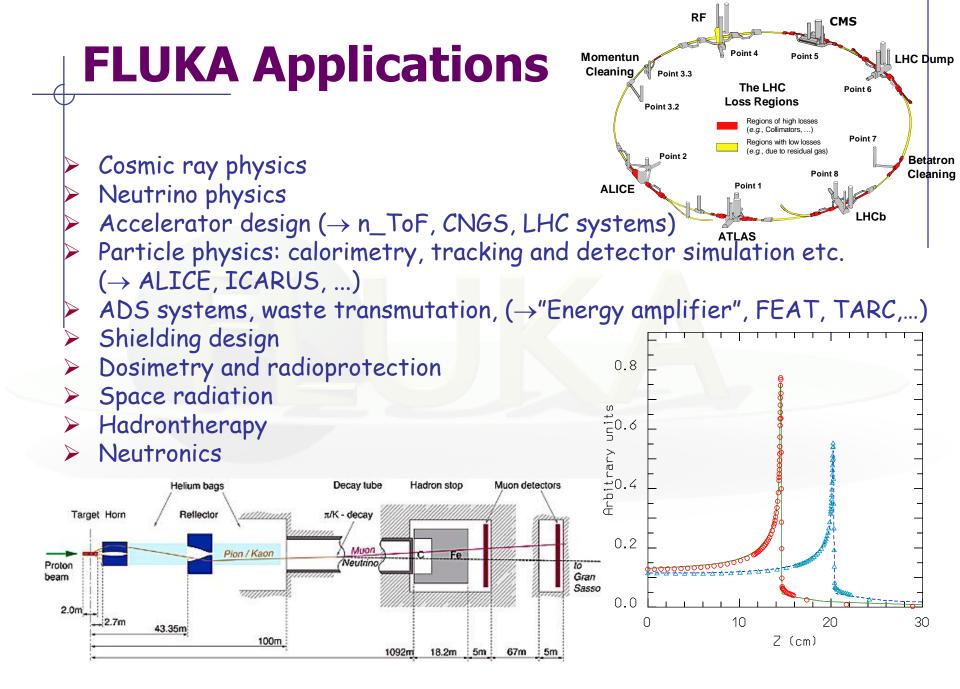

Developed and maintained under an INFN-CERN agreement Copyright 1989-2011 CERN and INFN

The History

The early days

1962: Johannes Ranft (Leipzig) and Hans Geibel (CERN): Monte Carlo for high-energy proton beams

The name:

The beginning:

1970: study of event-by-event fluctuations in a NaI calorimeter (FLUktuierende KAskade)

Early 70's to ≈1987: J. Ranft and coworkers (Leipzig University) with contributions from Helsinki University of Technology (J. Routti, P. Aarnio) and CERN (G.R. Stevenson, A. Fassò)

Link with EGS4 in 1986, later abandoned

The modern code: some dates

Since 1989: mostly INFN Milan (A. Ferrari, P.R. Sala): little or no remnants of older versions. Link with the past: J. Ranft and A. Fassò

1990: LAHET / MCNPX: high-energy hadronic FLUKA generator <u>No further update</u> 1993: G-FLUKA (the FLUKA hadronic package in GEANT3). <u>No further update</u>

1998: FLUGG, interface to GEANT4 geometry

2000: grant from NASA to develop heavy ion interactions and transport

2001: the INFN FLUKA Project

2003: official CERN-INFN collaboration to develop, maintain and distribute FLUKA

The FLUKA Code design - 1

- Sound and updated physics models
 - Based, as far as possible, on original and well-tested microscopic models
 - Optimized by comparing with experimental data at single interaction level: <u>"theory driven, benchmarked with data"</u>
 - Final predictions obtained with minimal free parameters fixed for all energies, targets and projectiles
 - Basic conservation laws fulfilled "a priori"
 - → Results in complex cases, as well as properties and scaling laws, arise naturally from the underlying physical models
 - Predictivity where no experimental data are directly available

It is a "condensed history" MC code, with the possibility use of single instead of multiple scattering

The FLUKA Code design - 2

Self-consistency

- Full cross-talk between all components: hadronic, electromagnetic, neutrons, muons, heavy ions
- Effort to achieve the same level of accuracy:
 - for each component
 - for all energies
- Correlations preserved fully within interactions and among shower components
- → FLUKA is NOT a toolkit! Its physical models are fully integrated

The Physics Content of FLUKA

> 60 different particles + Heavy Ions

- Nucleus-nucleus interactions from Coulomb barrier up to 10000 TeV/n
- Electromagnetic and µ interactions 1 keV 10000 TeV
- Hadron-hadron and hadron-nucleus interactions 0-10000 TeV
- Neutrino interactions
- Charged particle transport including all relevant processes
- Transport in magnetic fields
- Neutron multigroup transport and interactions 0 20 MeV
- Analog calculations, or with variance reduction

The FLUKA course: an Introduction

How:

This course is intended to provide users with the basic (and possibly more than basic!) knowledge of:

- a) The most relevant FLUKA instructions and options
- b) The physics models adopted in FLUKA
- c) The different scoring options embedded in FLUKA
- d) The different running options
- e) How to insert user code in FLUKA
- f) The tools to plot results
- g) The right approach to the existing documentation
- h) The procedures to overcome difficulties and problems and related debugging tools
- i) etc. etc.

- There will be formal lectures but they will be followed as much as possible by practical (simple) examples.
- Emphasis will be given to practice.
- If possible we shall try to transform your questions into cases of general interest.

A possible problem

- People here are not at the same level of FLUKA knowledge. There are those who already have some experience, maybe not negligible.
- However we need to start from scratch.
- We apologize to the experienced people and beg them to be patient: it's not excluded a priori that they can learn something new also concerning the very basic elements!

A glimpse of FLUKA

The FLUKA version

FLUKA20xx.ņ(y)(.m)

Major version

Respin

Minor version Patch level

Since 2006 each version is going to be maintained for 2 years max.

In this course we are using FLUKA2011.1

The FLUKA license (it is not GPL):

- Standard download: binary library + user routines.
 - FLUKA can be used freely for scientific and academic purposes, ad-hoc agreement for commercial purposes
 - It cannot be used for weapon related applications
 - It is not permitted to redistribute the code (single user, single site)
 - User can add their own scoring, sources etc through a wide set of user routines, provided they don't modify the physics
 - Relevant references for each FLUKA version can be found in the documentation
- It is possible, by explicit signature of license, to download the source for researchers of scientific/academic Institutions. (!!! now from NEA as well !!!)
 - FLUKA cannot be copied, even in part, into other codes, or translated into another language without permission.
 - The user cannot publish results with modified code, unless explicit authorization is granted in advance.

Using FLUKA

Platform: Linux with g77

Under test: Linux and Mac OSX (gfortran), Windows-Cygwin (g95)

The code can be compiled/run only on with operating systems, compilers (and associated) options tested and approved by the development team

Standard Input:

• Command/options driven by "data cards" (ascii file) . Graphical interface is available!!!!

Standard Geometry ("Combinatorial geometry"): input by "data cards"

Standard Output and Scoring:

- Apparently limited but highly flexible and powerful
- Output processing and plotting interface available

The FLUKA mailing lists

<u>fluka-users@fluka.org</u>

Users are automatically subscribed here when registering on the web site. It is used to communicate the availability of new versions, patches, etc.

<u>fluka-discuss@fluka.org</u>

Users are encouraged to subscribe at registration time, but can uncheck the relevant box. It is used to have user-user and user-expert communication about problems, bugs, general inquiries about the code and its physics content

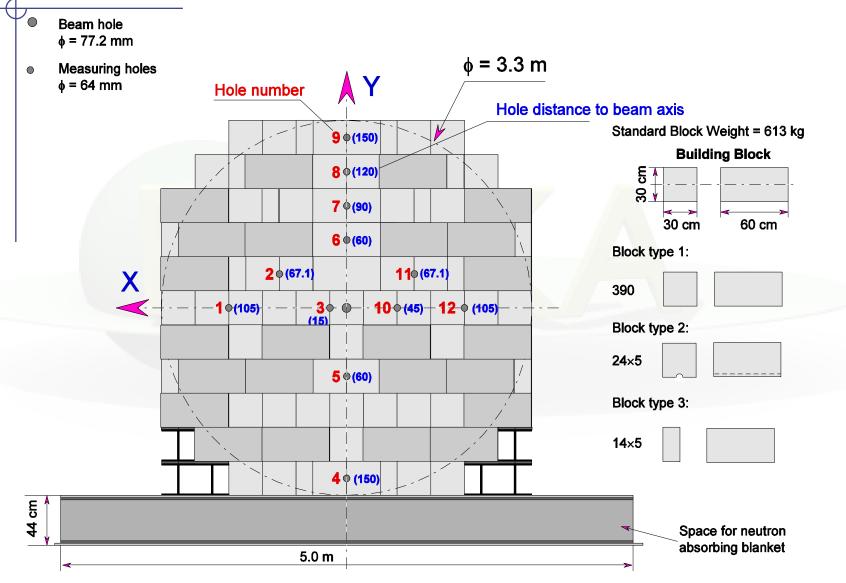

users are strongly encouraged to keep this subscription

FLUKA Description

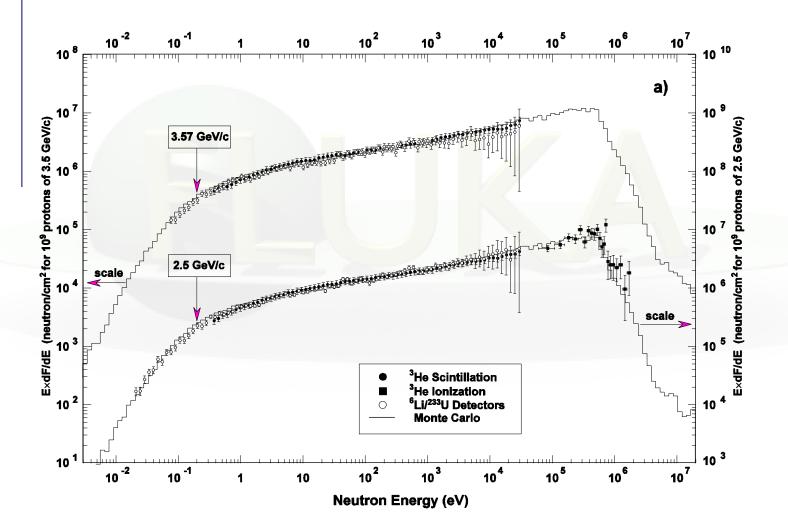

- FLUKA is a general purpose tool for calculations of particle transport and interactions with matter, covering an extended range of applications: from proton and electron accelerator shielding to target design, calorimetry, activation, dosimetry, detector design, Accelerator Driven Systems, cosmic rays, neutrino physics, radiotherapy etc.
- 60 different particles + Heavy Ions
 - Kull mileo red cooling Hadron-hadron and hadron-nucleus interaction "0"-10000 TeV
 - Electromagnetic and μ interactions 1 keV 10000 TeV
 - Nucleus-nucleus interaction up to 10000 TeV/n
 - Charged particle transport and energy loss
 - Neutron multi-group transport and interactions 0-20 MeV
 - n interactions
 - Transport in magnetic field
 - Combinatorial (boolean) and Voxel geometries
 - Double capability to run either fully analogue and/or biased calculations
 - On-line evolution of induced radioactivity and dose
 - User-friendly GUI interface thanks to the Flair interface
- Maintained and developed under CERN-INFN agreement and copyright 1989-2011
- http://www.fluka.org More than 4000 users all over the world

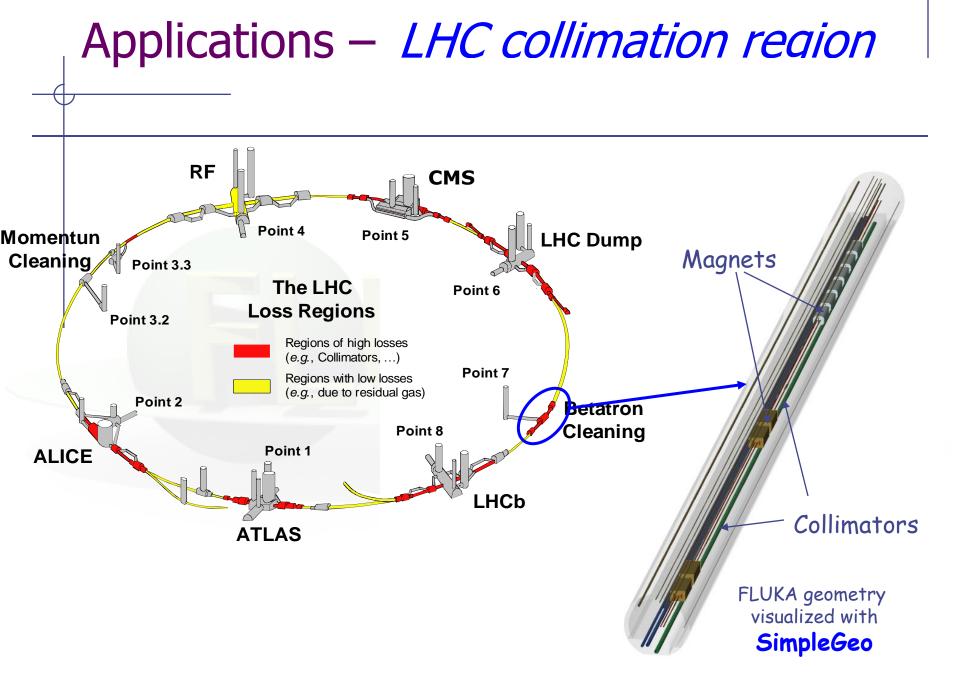

Examples of FLUKA Applications

The TARC experiment at CERN:

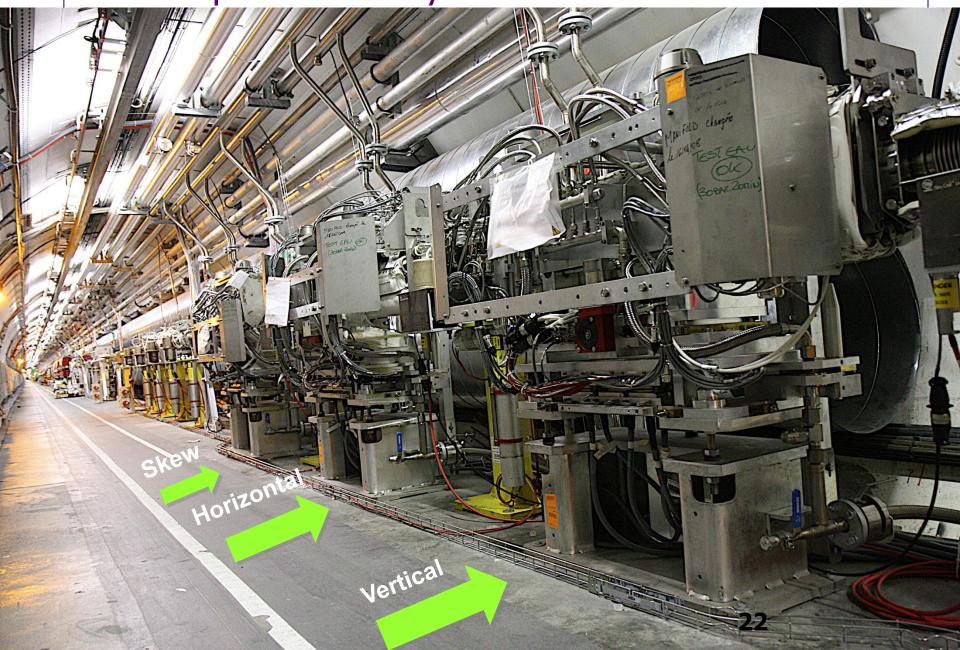

The TARC experiment: neutron spectra FLUKA + EA-MC (C.Rubbia et al.)

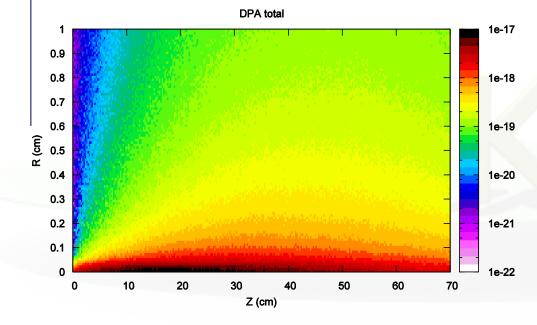

Example: 3 Primary Collimators IR7

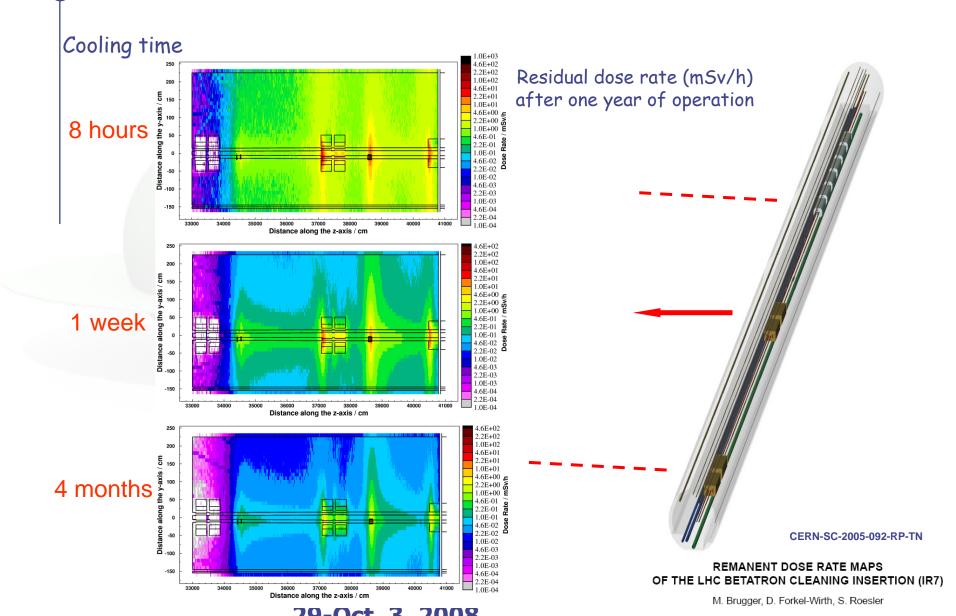

Studies of the radiation damage to the LHC copper collimators

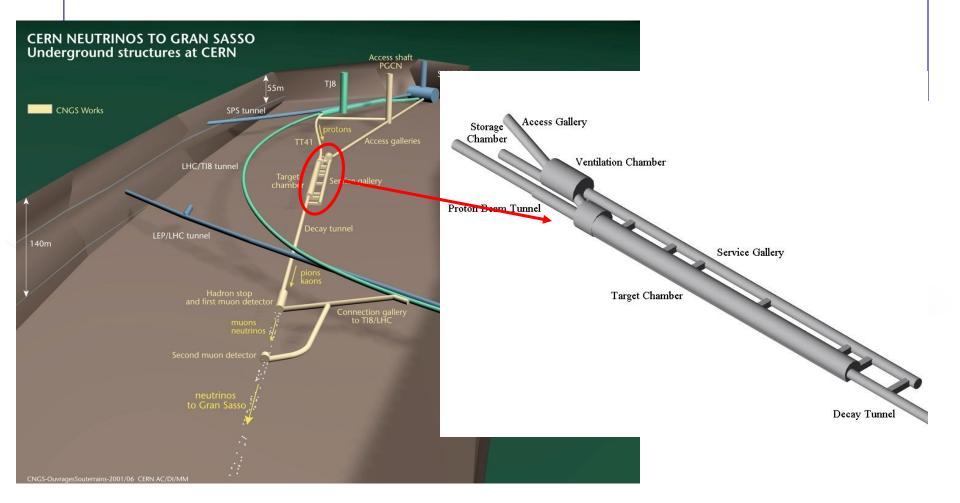

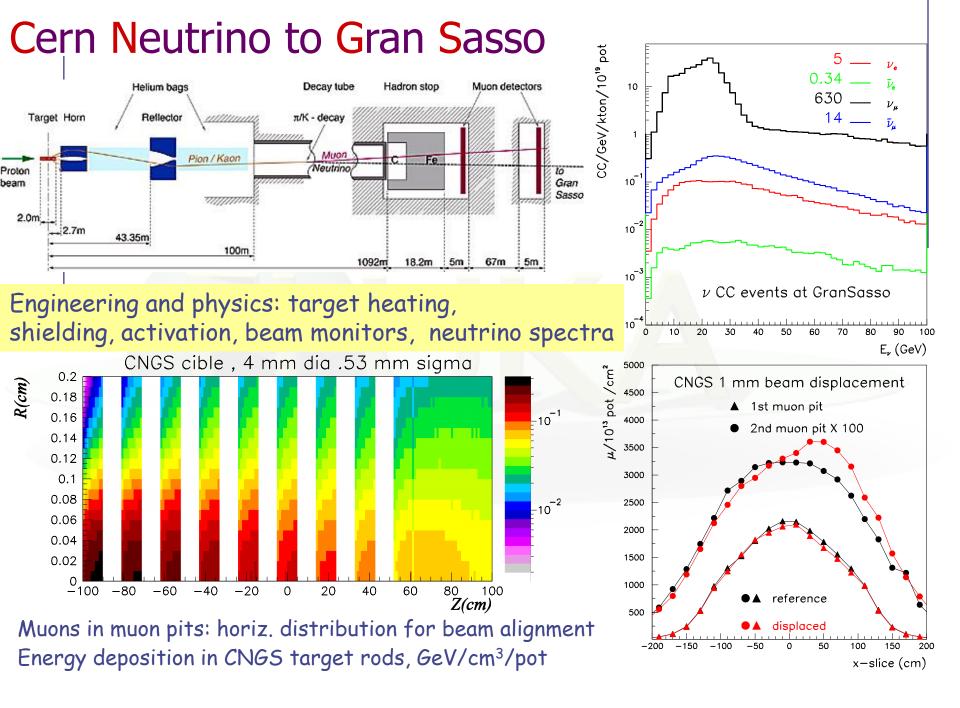

Estimated number of DPA per incident proton (beam size ~ accident case) on a copper jaw

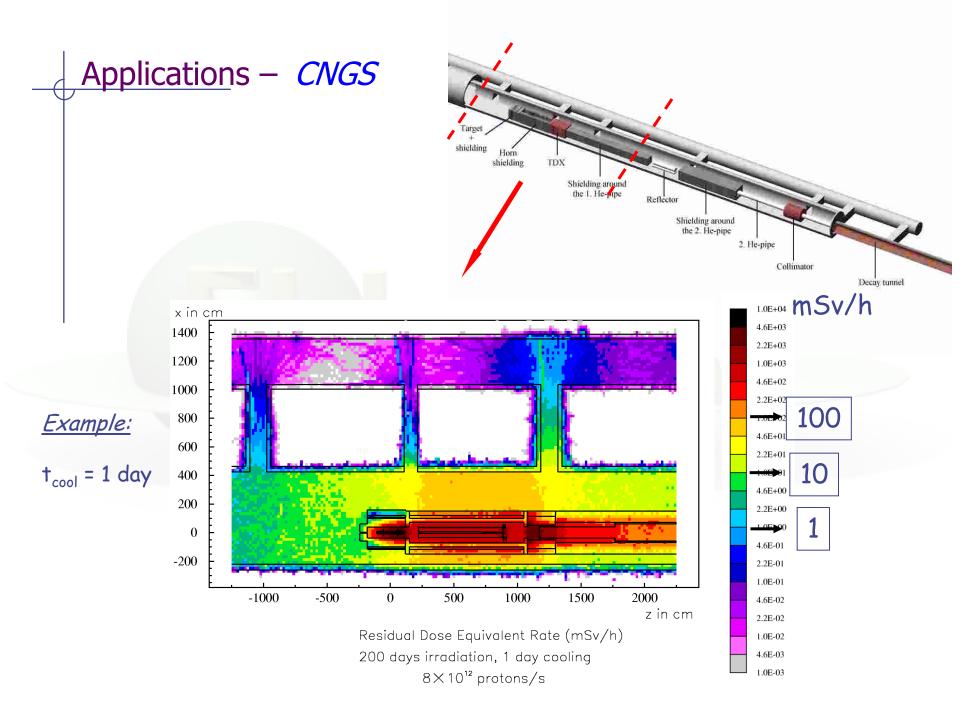

Applications – *LHC collimation region*

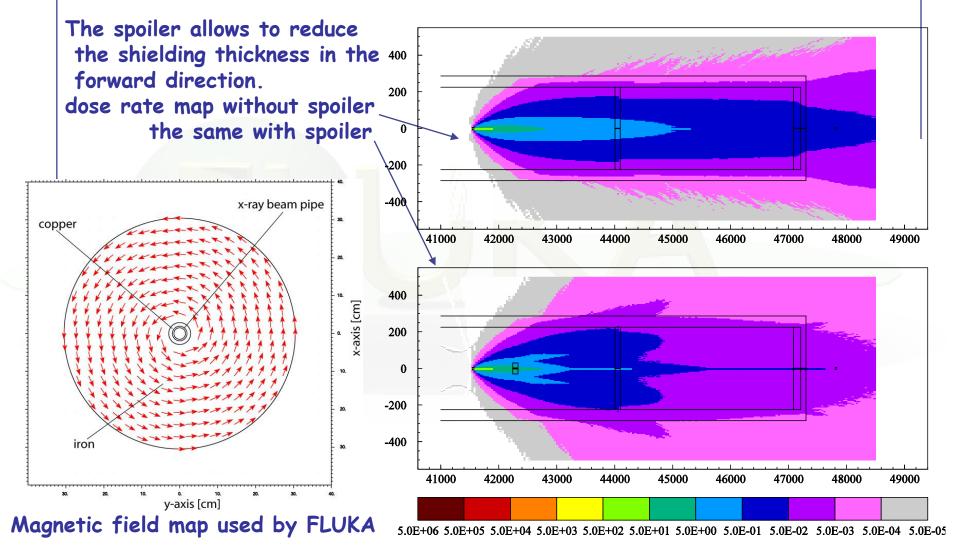

Applications – *CNGS*

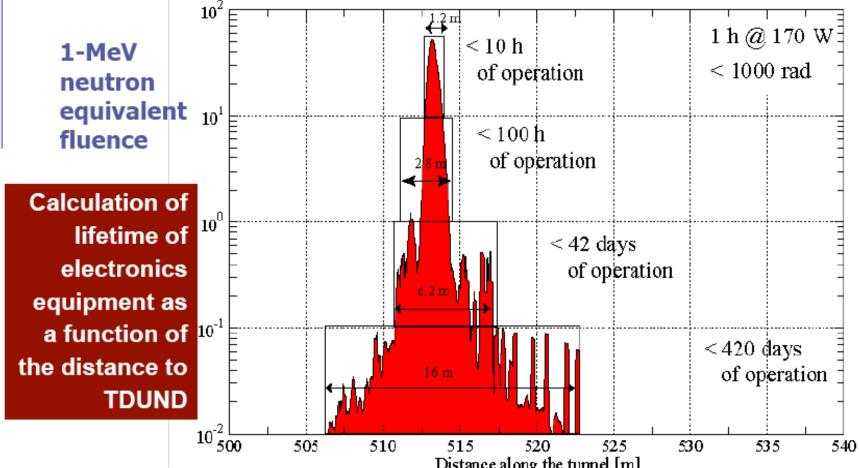

Effect of a magnetic muon spoiler in the LCLS tunnel

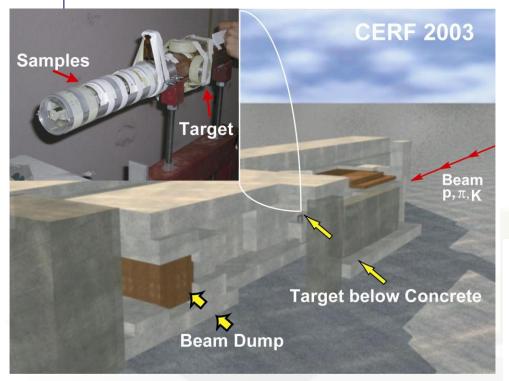

Damage to electronics

SLAC: Damage to electronics near the dumps at the LCLS (Linear Coherent Light Source)

The lifetime of electronic components can be estimated as a function of the distance to major sources of radiation

CERN-EU High-Energy Reference Field facility (CERF)

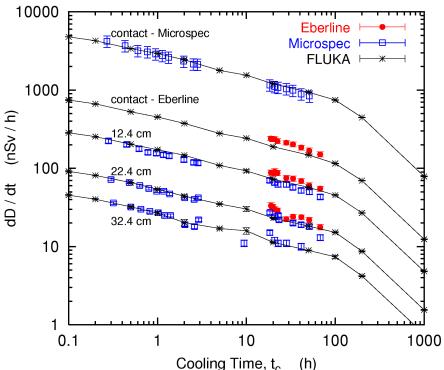

samples in contact with a 50 cm long, 7 cm diameter copper target, centred on the beam axis

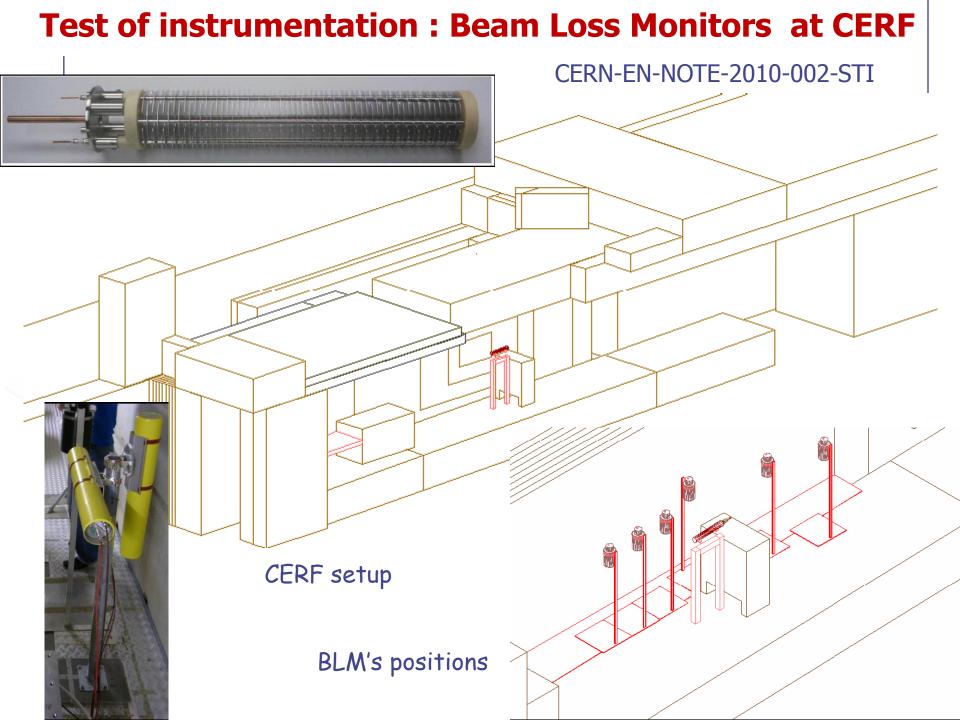

Thermo-Eberline dose-meter FHZ 672

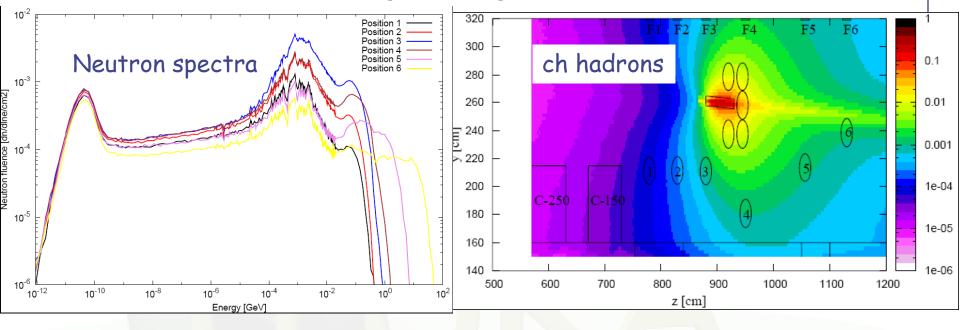

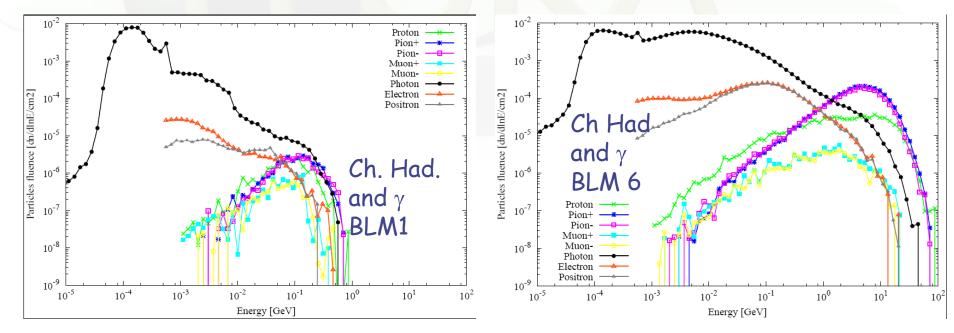

Iron

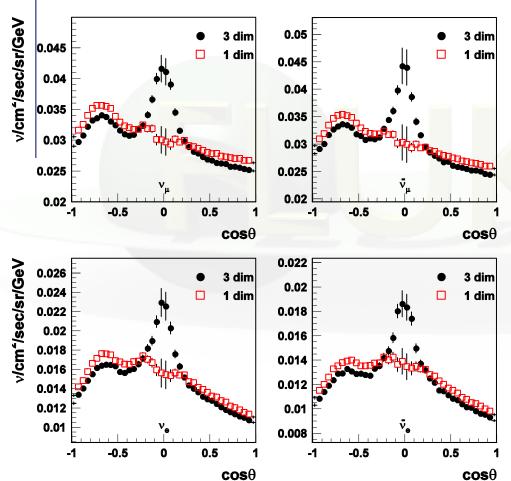

CERF particle spectra

(3D) Calculation of Atmospheric V Flux

Sub-GeV flux at Kamioka

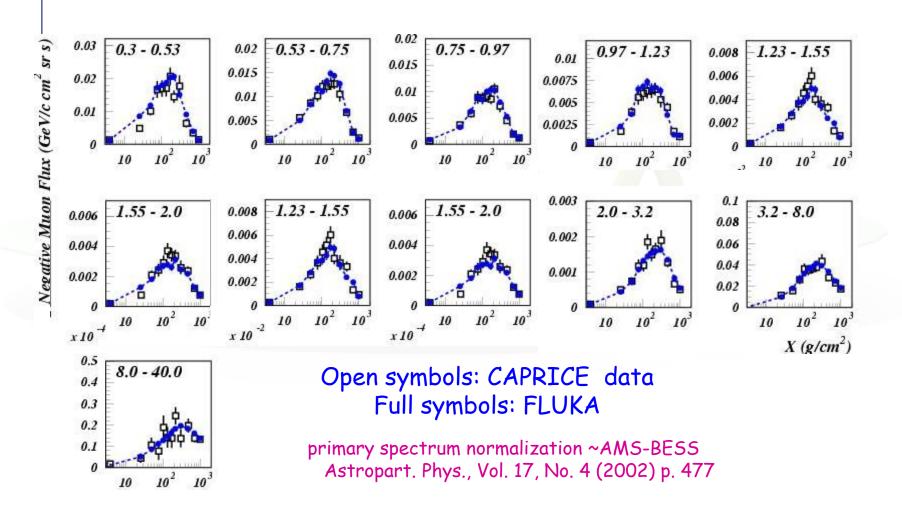

The first 3-D calculation of atmospheric neutrinos was done with FLUKA.

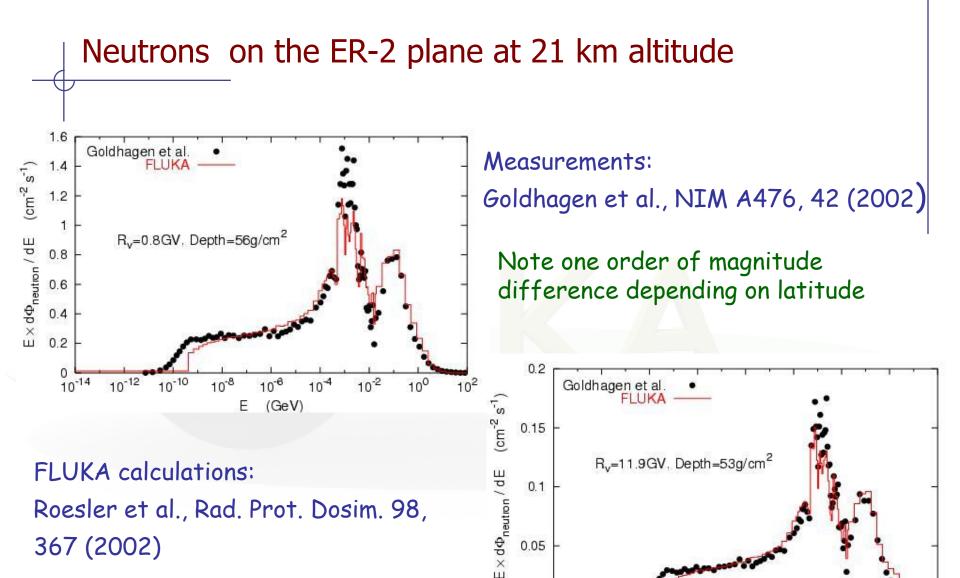

The enhancement in the horizontal direction, which cannot be predicted by a 1-D calculation, was fully unexpected, but is now generally acknowledged.

In the figure: angular distribution of v_{μ} , $\overline{v}_{\mu_{\mu}}$, v_{e} , \overline{v}_{e} .

In red: 1-D calculation

Dosimetry Applications

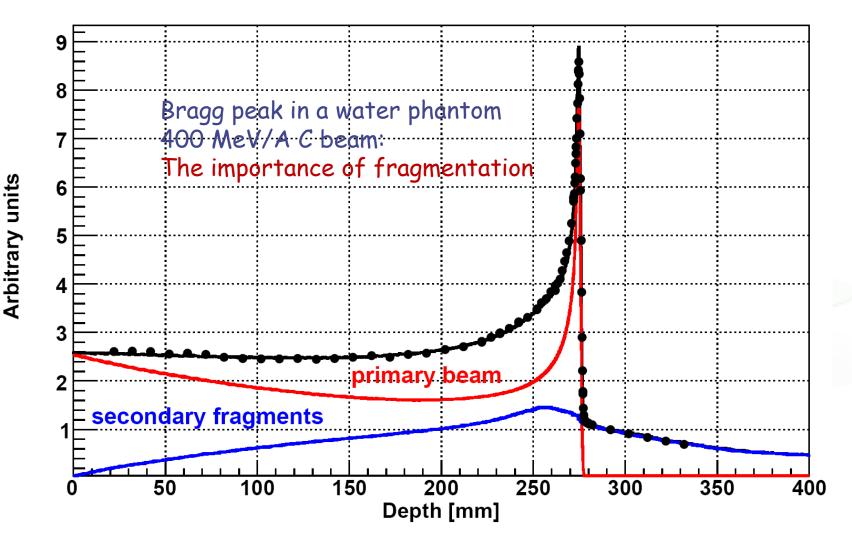

Ambient dose equivalent from neutrons at solar maximum on commercial flights from Seattle to Hamburg and from Frankfurt to Johannesburg.

Solid lines: FLUKA simulation

Dosimetry applications: doses to aircrew and passengers

Carbon Ion Therapy

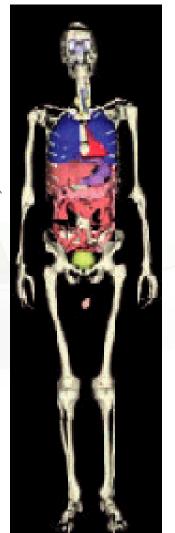

Exp. Data (points) from Haettner et al, Rad. Prot. Dos. 2006 Simulation: A. Mairani PhD Thesis, 2007, Nuovo Cimento C, 31, 2008

Using the information from the patient CT in the MC The Voxel Geometry

- FLUKA can embed voxel structures within its standard combinatorial geometry
- Transport through the voxels is optimized and efficient
- Raw CT-scan outputs can be imported

2002 The GOLEM phantom enss et al, Petoussi

Proton therapy: dose and PET distributions from MC, Head Clival Chordoma, 0.96 GyE / field, $\Delta T_1 \sim 26 \text{ min}$, $\Delta T_2 \sim 16 \text{ min}$ -100 -50 0 50 -100 **MC PET** Meas. PET **TP Dose** 150 -50 50 100 -100 0 50 100 -50 0 -50 50 10 0 mm mm mm
